

Handling the Test Data and Executing It in Multiple Environments for Bus Ticket Booking Application.

Description

Create a TestNG framework that helps to test the bus ticket booking application in multiple environments.

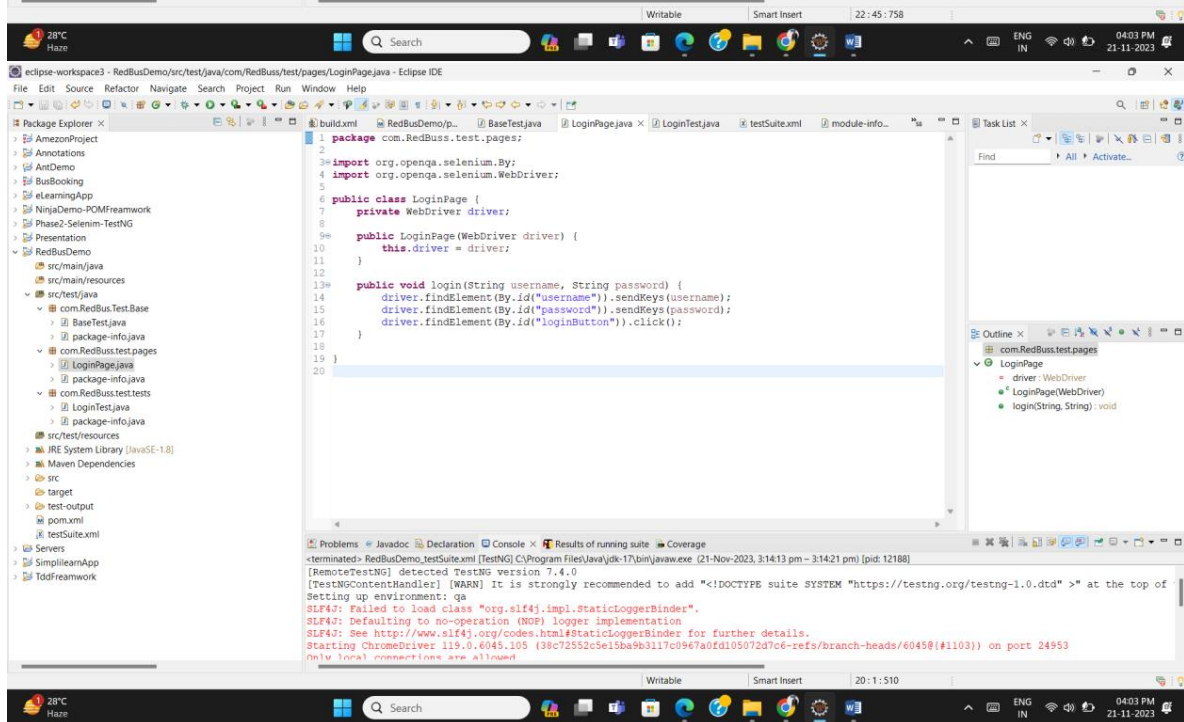

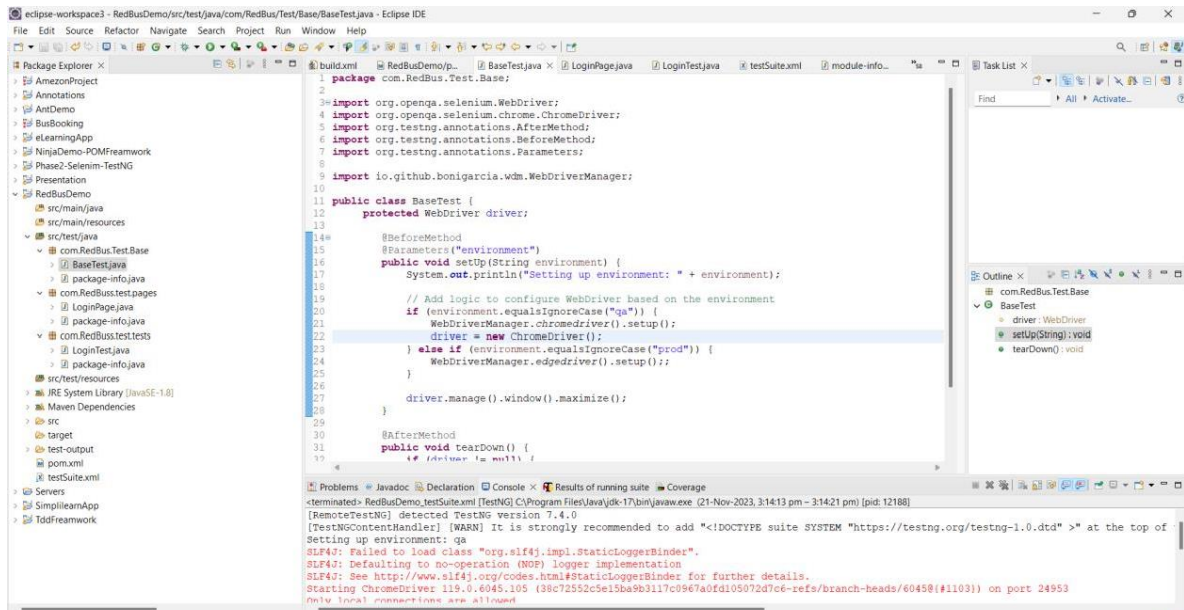

Background of the problem statement:

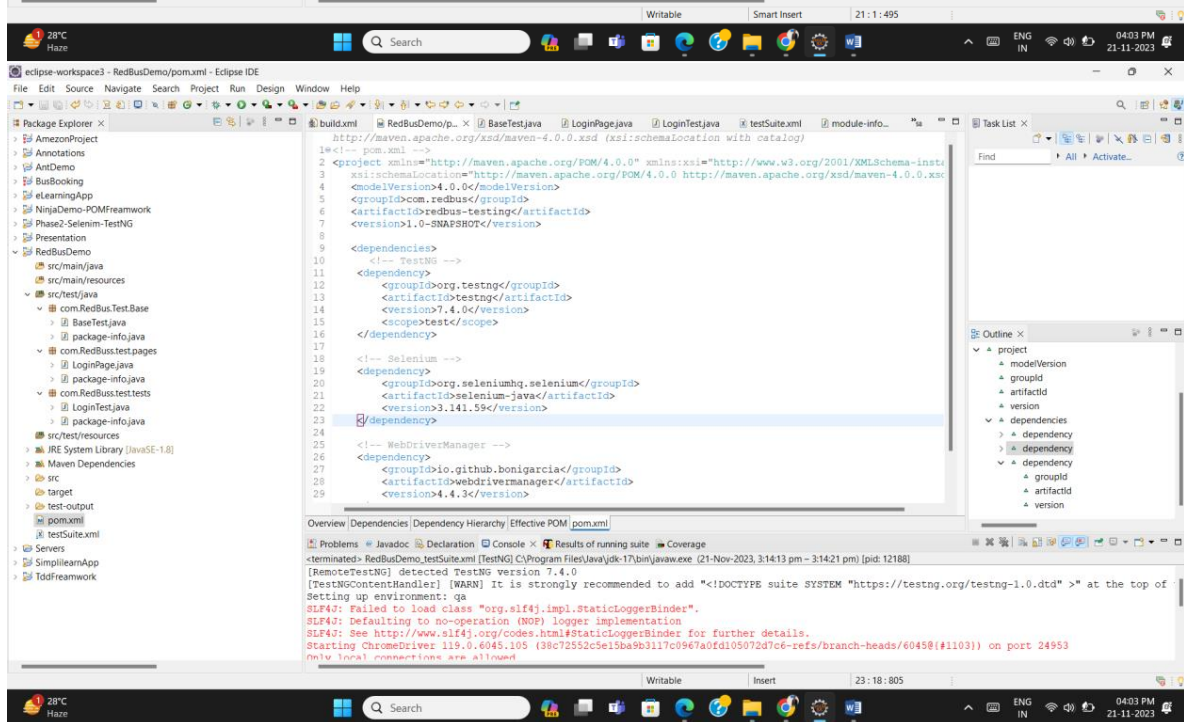

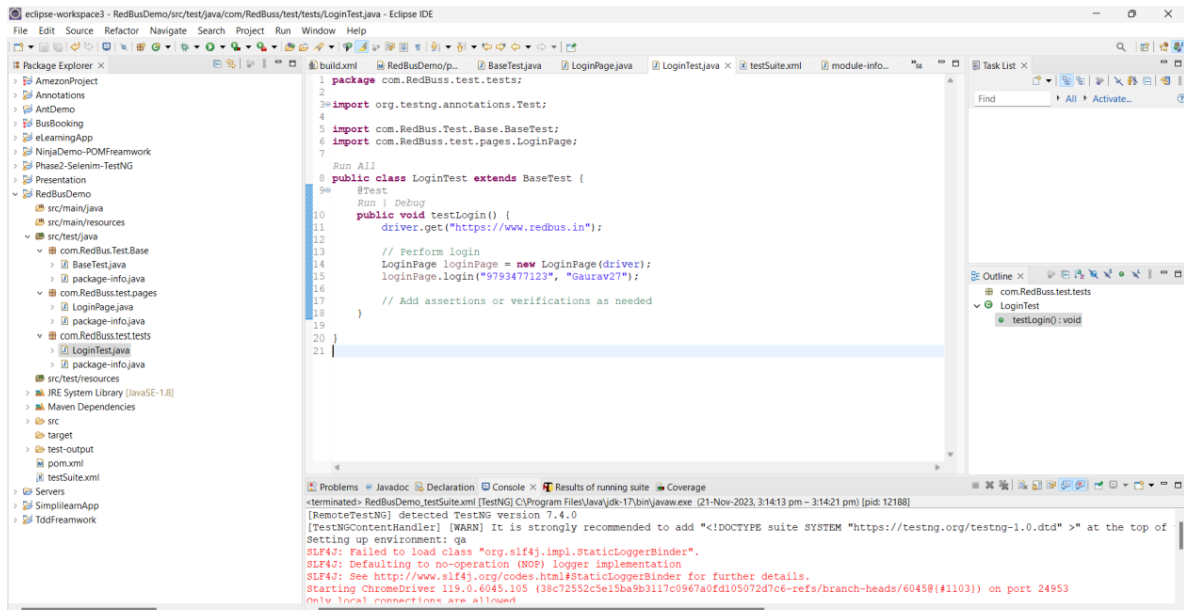

As a part of developing TestNG and POM framework, the admin requires a resource like multiple virtual machines to execute it in different environments.

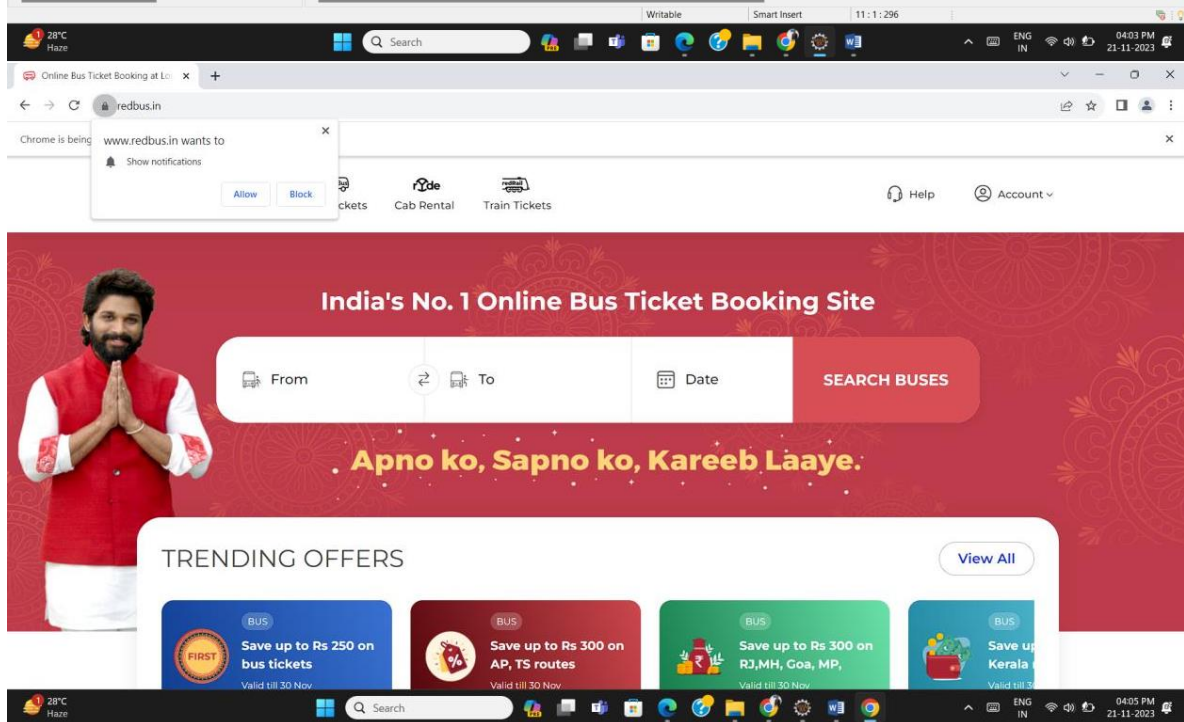

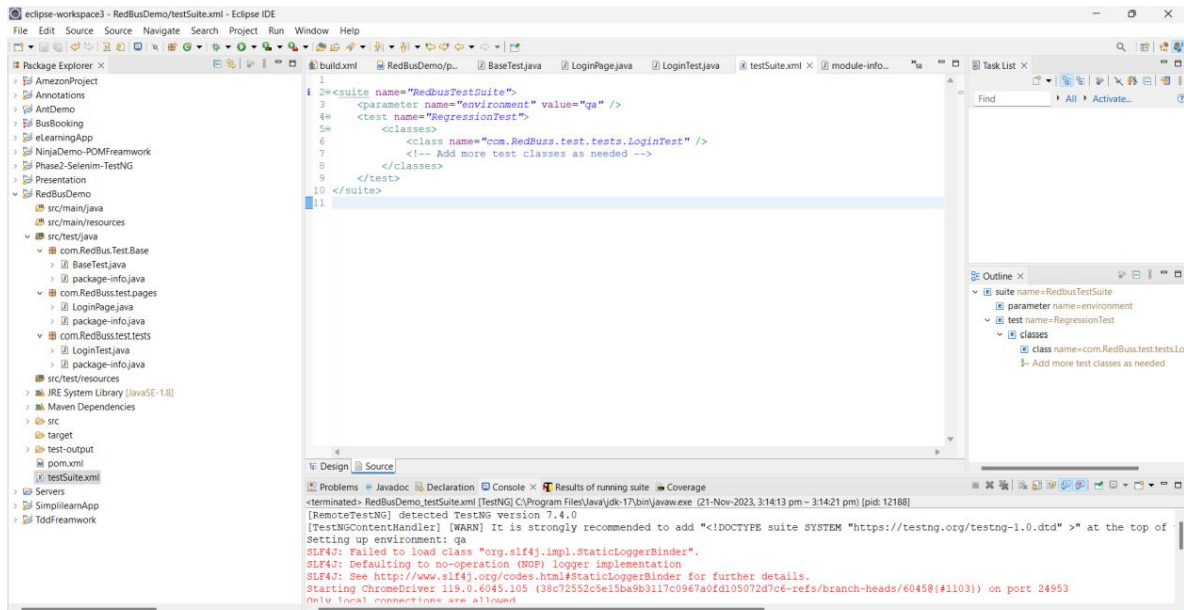

You must use the following:

- Eclipse IDE
- Java Development Kit (Version 8)
- Selenium standalone server (Version 3.141.59)
